LMS Mobilizer

Mobile learning solutions allow you to reach your staff at any time and in any place to enable training processes quickly in a particular context. So they can gain access to knowledge "just in time" at the time and in the context where the need arises.

LMS Mobilizer is particularly well suited for professionals, sales representatives, store managers, trainers who need continuous and easily available access to training / information contents related to their work.

LMS Mobilizer can also be used as a device that technical and / or operational professionals can check to have real-time access to information for on-site services aimed at solving specific problems.

LMS Mobilizer is a software component that can provide the services offered by a Learning Management System on mobile devices such as tablets and smartphones.

The product allows users to access and use the services of an LMS on various mobile platforms (iOS, Android, Windows Mobile, Blackberry, ...).

LMS Mobilizer can deliver the following services on the open-source LMS Docebo:

- login / logout
- self-registration to the e-learning platform
- self-enrolment in a course
- use of the (SCORM-compliant) course
- tracking of learning activities
- browsing the course catalogue
- researching the Course Catalogue
- connection and participation in Virtual Classroom sessions.

Thanks to its design logic, **LMS Mobilizer** can possibly be extended to include more complex functions compatible with any LMS, open source and / or commercial, so that it can deliver LMS services for any role: student, teacher, tutor or training administrator.

To use **LMS Mobilizer**, all that is needed is a simple configuration procedure through which the application is adapted to the different needs of the mobile learning processes.
